**A CLOSER LOOK**

A unique burrishing process polishes the surface in repeated steps to a precise finish. The ultra-smooth surface helps reduce wear on both the disc and disc drive head.

The disc surface is protected by an anti-static lubricant which prolongs head and media life.

Every disc is tested track by track, sector by sector to certify it 100% error free. So you can rely on dependable performance, time after time, day after day.

A protective hub ring on mini discs protects against edge damage to the drive access opening assuring long-term performance and longer disc life.

Each disc jacket contains bottom stress relief notches which distribute pressure and stress along a lateral line to prevent disc damage during handling.

A highly durable binder system output to provide playback accuracy.

*The flexible disc vinyl jacket is permanently glue-sealed on all flaps, edge to edge. This total bonding provides an extra margin of strength and protection to extend disc life. Made extra stiff, the jacket allows easy loading the first time, everytime.*

The 5¼" and 8" flexible discs from Memorex® are your assurance of performance and data safety. Only the finest quality materials are used. Sophisticated manufacturing techniques produce and assemble the highest quality components. Stringent testing provides certification that the flexible disc you get is perfect. And the Memorex commitment to research ensures continuing enhancements to improve disc performance and provide added value.

Memorex flexible discs are backed with a strong one year warranty and field support by a dedicated, professional distributor network nationwide.

PERFORMANCE.
